

The Clean Hydrogen Future Coalition (CHFC) provided the following statement on the Clean Hydrogen Production Incentives Act of 2021:

*“The Clean Hydrogen Future Coalition (CHFC) is encouraged by Senator Heinrich’s support of RD&D to reduce the cost and improve the efficiency of electrolytic hydrogen through the introduction of the Clean Hydrogen Production Incentives Act of 2021.*

*The CHFC formed around the principle of supporting resource-agnostic, technology-neutral policy approaches to hydrogen production, transport, storage, and utilization that have the potential to support U.S. decarbonization objectives across industries and sectors. Hydrogen produced with renewable and nuclear energy via electrolysis is one of several clean hydrogen production pathways that must be pursued in order to unlock a clean hydrogen economy at scale. CHFC members promote all forms of clean hydrogen production so long as it results in significantly reduced, net-zero, or net-negative carbon dioxide emissions and contributes to economywide decarbonization.*

*We look forward to working with Senator Heinrich and his Senate colleagues to ensure that RD&D funding and program direction in support of electrolytic hydrogen is included in any infrastructure package that is considered by Congress.”*
