

The Clean Hydrogen Future Coalition (CHFC) provided the following statement on the Energy Sector Innovation Credit legislation:

*“The Clean Hydrogen Future Coalition (CHFC) is encouraged by Senators Whitehouse (D-RI) and Crapo’s (R-ID) bipartisan leadership and support of clean hydrogen production through the introduction of the Energy Sector Innovation Credit [ESIC] Act.*

*The CHFC formed around the principle of supporting resource-agnostic, technology-neutral policy approaches to reduce the carbon intensity of hydrogen production, transport, storage, and utilization. This bill would stimulate clean hydrogen production as a first step in the tool kit to create a clean hydrogen economy. CHFC members promote all forms of clean hydrogen so long as it results in significantly reduced, net-zero, or net-negative carbon dioxide emissions.*

*We look forward to working with both Senators to ensure policies needed to enhance investment opportunities that accelerate and scale the use of clean hydrogen throughout our economy are included in legislation that is considered by Congress. We applaud their bipartisan cooperation to advance our energy future.”*
