

The Clean Hydrogen Future Coalition (CHFC) provided the following statement in support of the Senate Energy and Natural Resources Committee's passage of the Energy Infrastructure Act:

*"The Clean Hydrogen Future Coalition (CHFC) supports the advancement of federal policy solutions that promote the economy-wide deployment of clean hydrogen technologies and applauds the Senate Energy and Natural Resources Committee's passage of the Energy Infrastructure Act.*

*"This legislation highlights the importance of adequately and responsibly investing in the nation's energy infrastructure, including hydrogen, and aligns with the Coalition's technology-neutral policy approach. It would provide critical investments in RD&D for all forms of clean hydrogen through the creation of a regional hub program and a roadmap for clean hydrogen development in the U.S." says Erik Mason, Nikola's Global Head of Energy Supply & Trading and Chair of the Clean Hydrogen Future Coalition.*

*Investment in the development of clean hydrogen technologies is critical to achieving decarbonization goals while also increasing U.S. global competitiveness. This legislation would advance those goals and move the U.S. towards a cleaner economy.*

*We look forward to working with Senator Manchin and his Senate colleagues to ensure that RD&D funding for all forms of clean hydrogen is included in any legislation that is considered by Congress."*
